

Eric A. Wright, Pharm.D., BCPS is a research investigator at Geisinger's Center for Health Research, Danville, PA, and Associate Professor of Pharmacy Practice at Wilkes University, Wilkes-Barre, PA. As a current outcomes and health services researcher, he draws from his years of direct ambulatory care patient care to develop innovative solutions to today's medication use problems. Dr. Wright's areas of focus include cardiovascular and diabetes outcomes research, health information technology, transitions of care, and medication non-adherence. Dr. Wright is principal investigator on several investigations including a project connecting inpatient and community pharmacists to improve outcomes among high-risk patients discharged from the hospital. Dr. Wright is also the director of a multi-year technology project leveraging health information to assist providers in recognizing and addressing medication adherence. Finally, Dr. Wright is passionate about pharmacy education and holds firm to the belief that passing on knowledge and experience to the next group of health professionals will synergistically magnify the impact of individual work.
